Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of their dates, and they should not be relied upon in making purchasing decisions.

# Agenda

## Overview

- What is Business Entity Recognition

## Use-cases

- Explore various use-cases and applications of Business Entity Recognition

## Technical Overview

- Architecture, APIs and Machine Learning process

## Demo

- A demo showing Business Entity Recognition in action

# What is Business Entity Recognition?

# Business Entity Recognition (BER)

Detect and highlight any given type of named entity in unstructured text

Text Document  
for Entity  
Extraction

Pre trained/Custom  
Entity Recognition  
model for Text

Automatically  
recognize entities in  
text document

**Powerful machine learning technology to detect and highlight any given type of named entity in unstructured text into pre-defined categories**

Increase efficiency  
and reduce errors

Immediately  
Productive with Pre-  
Trained models

Increase  
overall document  
processing productivity

# Business Entity Recognition: Use-cases

# Locating and Classifying Named Entities in Unstructured Text

## Moments of truth

The average office worker **receives 121 emails and sends about 40** each day.

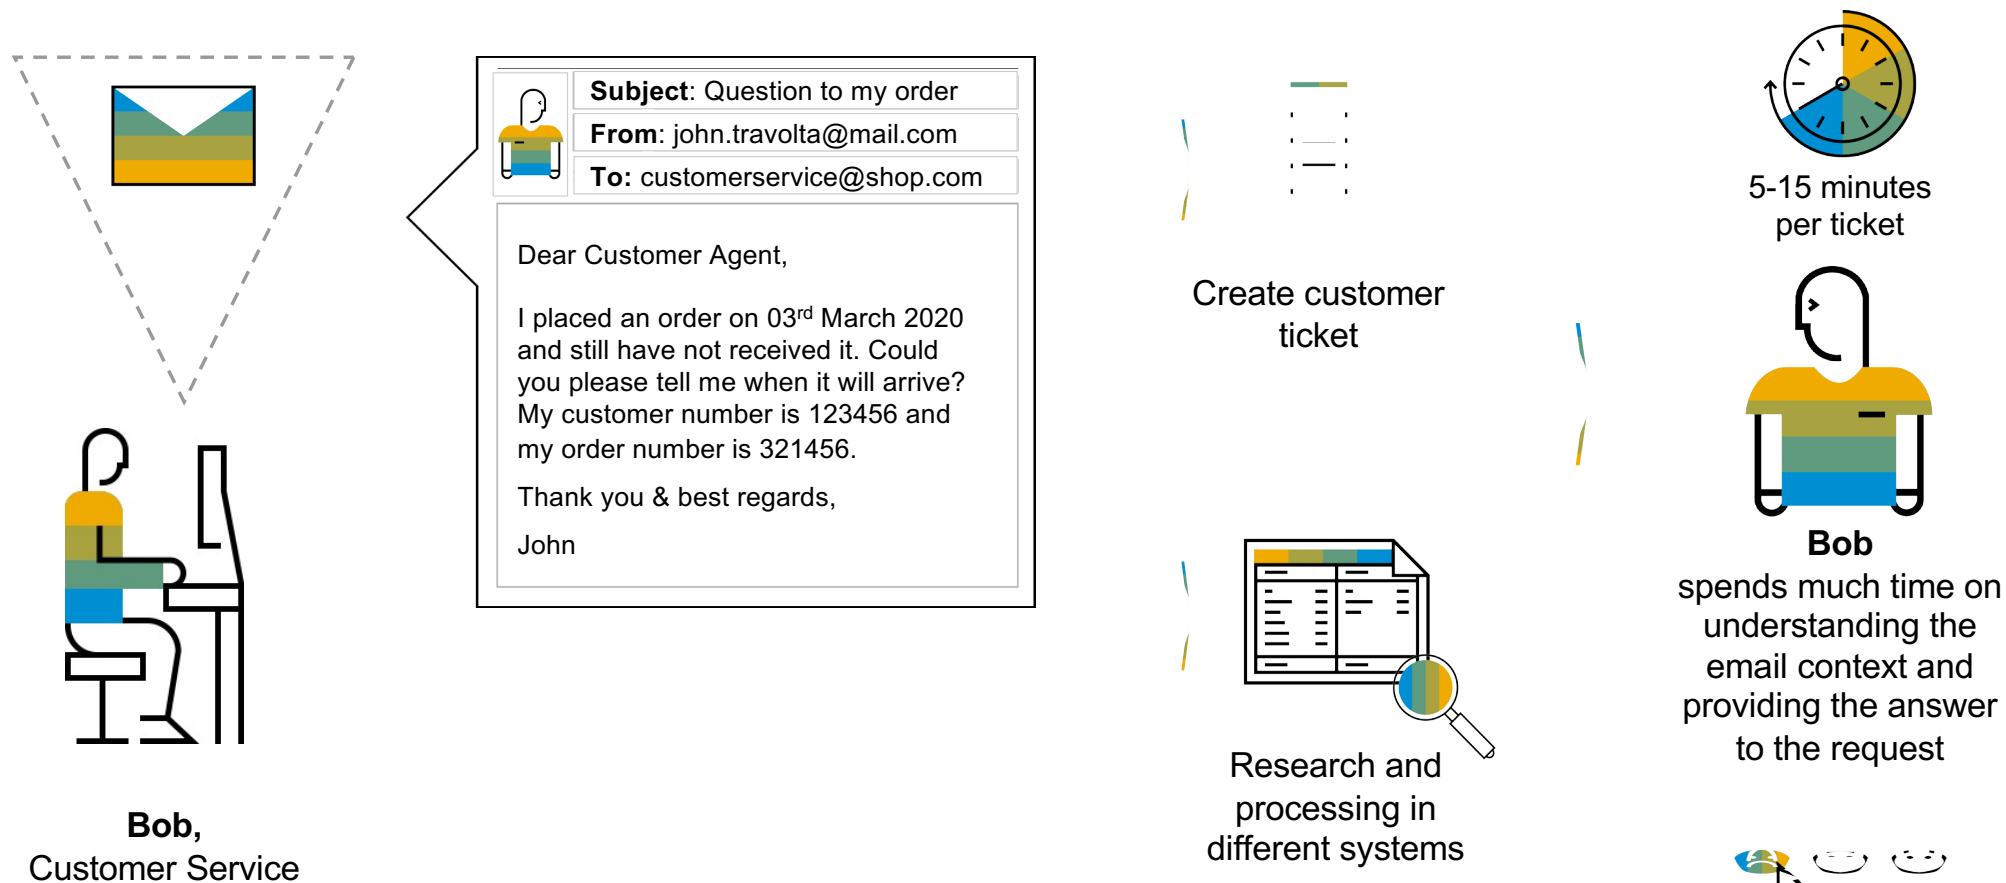

Employees spend **20 mins** on average to complete one expense report.

# Locating and Classifying Named Entities in Unstructured Text

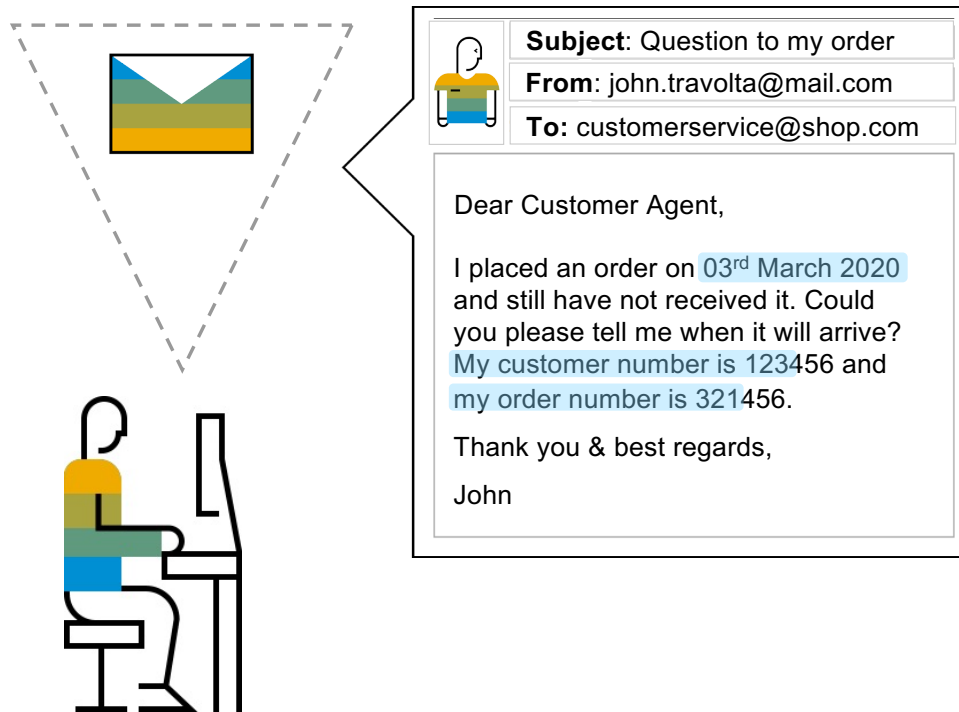

Problem: long time to understand the context of emails and processing them

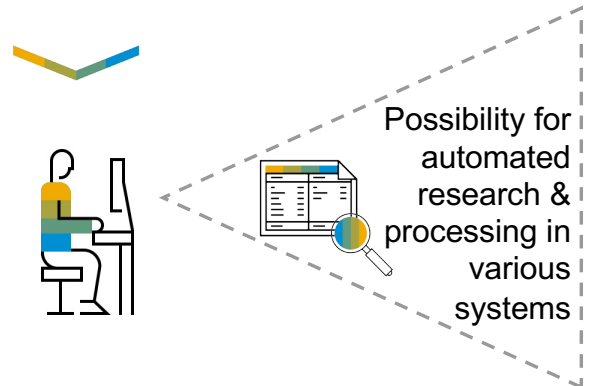

# Locating and Classifying Named Entities in Unstructured Text

## Solution: Business Entity Recognition

**Bob,**  
Customer Service

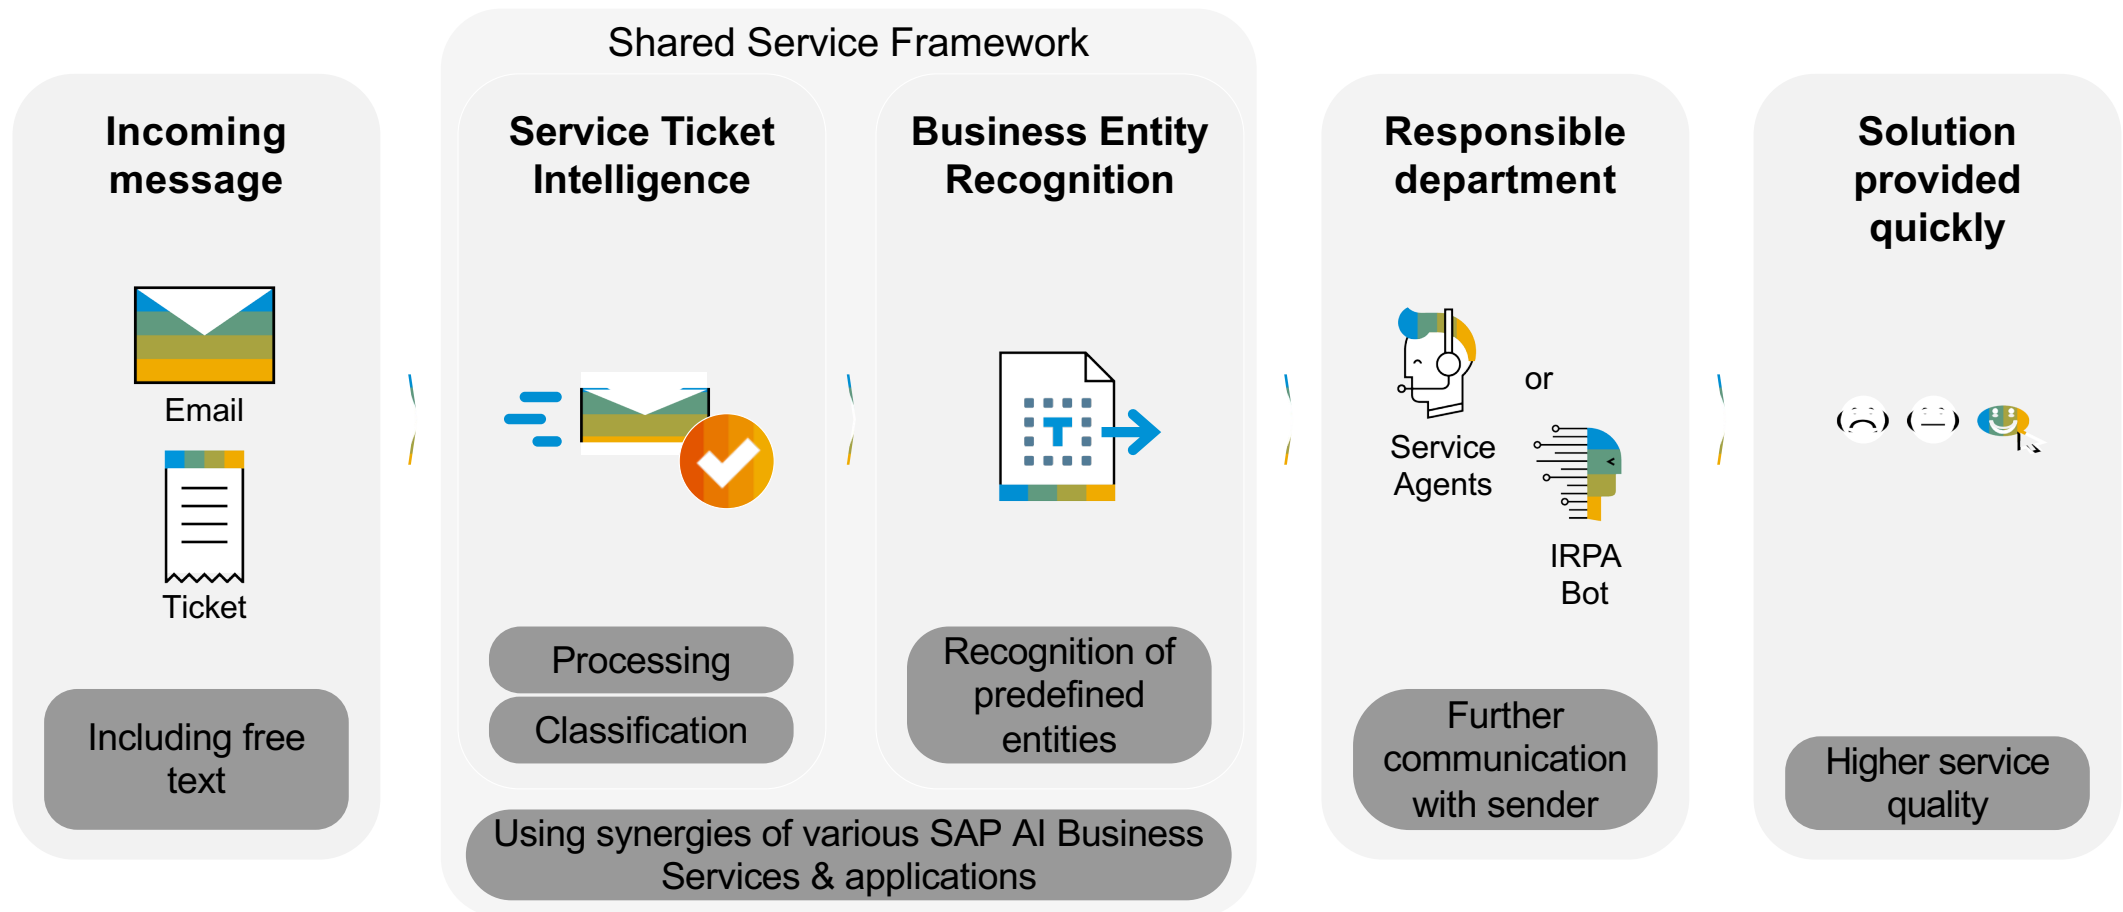

**Bob**  
can now provide a faster  
response and use his time  
for value-creating tasks

# Locating and Classifying Named Entities in Unstructured Text

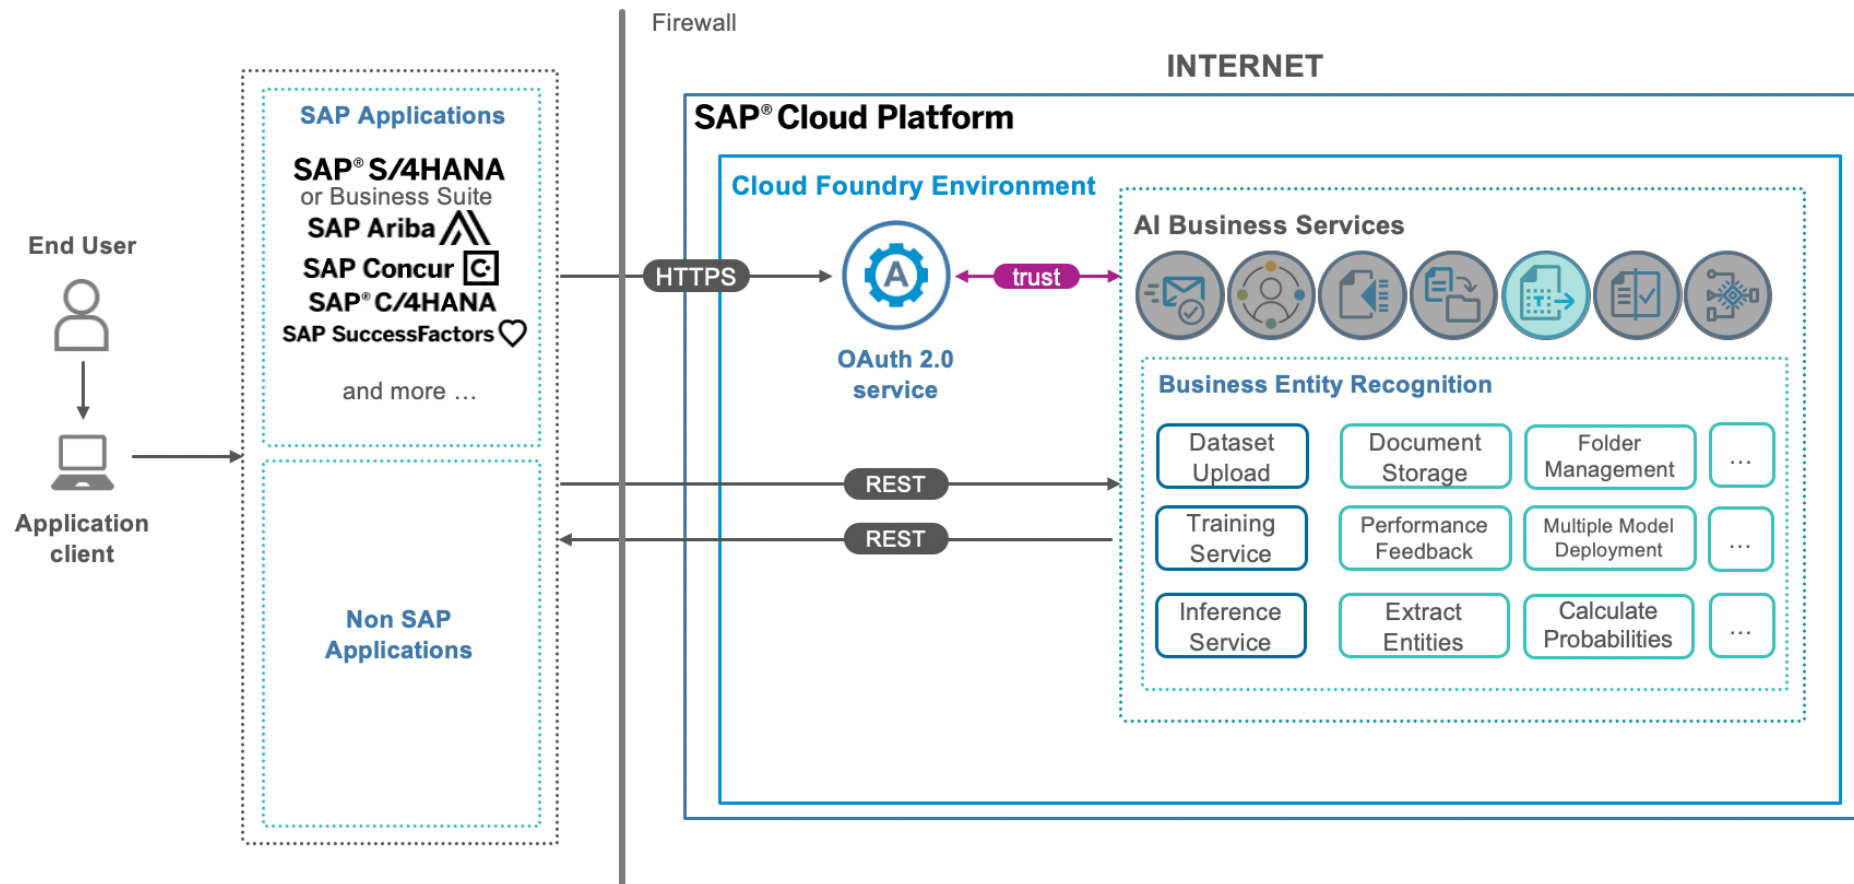

## Shared Services Framework

# Business Entity Recognition: Technical Overview

# Business Entity Recognition Architecture

## Business Entity Recognition: APIs

BER has a set of APIs to perform the following operations:

- Create dataset and upload documents
- Trigger training to get a custom model based on your dataset
- Deploy the custom model to use it for inference
- Perform inference with the deployed model to extract entities

# API: Trigger training to create custom models

## Datasets Training Data APIs : Upload, delete and get training data

GET	/datasets	Retrieve all datasets
POST	/datasets	Creates a new training dataset entry
DELETE	/datasets/{datasetId}	Deleting a dataset and its contents
GET	/datasets/{datasetId}	Get specific dataset details
GET	/datasets/{datasetId}/documents	Get documents present in a dataset
POST	/datasets/{datasetId}/documents	Upload a training document
DELETE	/datasets/{datasetId}/documents/{documentId}	Deletes specific training document of the given dataset ID
GET	/datasets/{datasetId}/documents/{documentId}	Retrieve specific training document detail of the given dataset ID

## Training Training Job APIs : Trigger training job and get status

POST	/training/jobs	Submit training job
DELETE	/training/jobs/{jobId}	delete training job
GET	/training/jobs/{jobId}	Get training status

## Deployments Model Deployment APIs : Create, delete and get model deployments

GET	/deployments	Get all deployment details
POST	/deployments	Deploy a model
DELETE	/deployments/{deploymentId}	Undeploy a successfully deployed model
GET	/deployments/{deploymentId}	Get information of a deployed model

# API: Inference

## Inference Inference Job APIs : Trigger inference job and get extracted entities

**POST**

**/inference/jobs** Submit inference job

**GET**

**/inference/jobs/{jobId}** Get inference status and extracted entities

# Summary

## Upload Data

- Use Pre-trained models for specific business problems
- Upload own entities with annotations to train a custom specific model

## Train Model

- Train new entity models
- Create model version
- Get feedback on model performance

## Deploy Model

- Activate trained model version
- Deactivate model version when necessary

## Prediction

- Provide data for entity recognition
- Get machine learning results + confidence scores

# Business Entity Recognition: Data Management

## Training Data

- Stored in Minio object storage
- The data is isolated for each tenant
- The service user has the full control of the data- upload and delete APIs are provided
- It is recommended to use anonymization to restrict processing of PII by the service

## Inference Data

- Texts provided for inference are temporarily stored in the database (PostgreSQL)
- A scheduled job runs every 24 hours to delete the texts which are older than 12 hours
- Hence, no inference text would be stored for more than 24 hours

# Business Entity Recognition: Machine Learning Process

## Data pre-processing

- Validate training data format
- Validate annotated labels
- Split the dataset to train and test dataset

## Model Training

- Deep Learning applied to Natural Language Processing
- Basic components: convolutional and recurrent neural networks
- Transfer learning capability:
  - Pretrained language models (Denoising Auto-Encoder)
  - Word embeddings
- Support extension to multilingual data (through language specific embedding)

## Model Selection

- Multiple models generated
- Each model validated on the test dataset
- Select model with best f1-score averaging across label classes

# Demo

Locating and Classifying Named Entities in Unstructured Text

# Continue your **learning experience** from SAP TechEd in 2020

Your exclusive path to build and maintain SAP solution skills anytime, any place

Get empowered with access to relevant, up-to-date digital learning for SAP TechEd participants through a complete enablement solution that drives adoption and innovation.

## Deepen your **learning experience** from SAP TechEd

[Activate your free access](#) to SAP Learning Hub, event edition, for:

- **Learning Journey** illustrations to guide you through **complementary** self-paced learning content
- **Content specific to SAP TechEd** in the online **SAP Learning Room for SAP TechEd**
- Access to SAP experts in **special live sessions**

## Deepen and validate your **SAP solution skills**

[Subscribe](#) to SAP Learning Hub, solution editions, for:

- **Solution-specific Learning Journey guides, content, collaborative learning, and hands-on practice** for your role and goals
- Drive performance and business success with validated solution expertise from the **SAP Global Certification** program

## Your benefits

- Gain insight into the latest innovations, and master software proficiency
- Keep skills up-to-date, and enable performance and business success with help from SAP solution experts
- Achieve competitive advantages and digital transformation success with trusted certifications

**500,000+**

Learners in SAP Learning Hub

**100+**

Experts getting certified per day

**150+**

SAP Global Certifications
